SUMMARY

Frontend Engineer with 3+ years of experience delivering scalable, user-centric applications using React and TypeScript. Grounded in a willingness to grow and continuous learning, I have achieved performance optimization and enhanced user experience. Skilled at collaborating across teams to proactively propose and implement solutions that drive measurable impact.

EXPERIENCE

ABZ Inc. (Seoul, South Korea)
Frontend Engineer

Jan. 2024 - Present

- Built a collaboration service for brands and creators using **Next.js** and **Typescript**, defined numerous forms and data interfaces, optimized APIs with **react-query**, and improved user experience by conducting direct user interview
- Developed a versatile e-commerce solution with Next.js and TypeScript for multiple stakeholders, streamlining the entire product lifecycle's business logic, and created a robust, reusable form architecture with **react-hook-form**
- Enhanced analytics reliability in unstable network conditions by implementing the **sendBeacon API**, ensuring accurate data collection across all user sessions and improving UX consistency
- Optimized the CI/CD pipeline for Next.js services, cutting deployment time by 50% through **Yarn Berry** implementation and a multi-stage **Docker** environment that reduced build image size by 90%
- Hosted a biweekly **Engineering Day**, fostering a culture of continuous learning and accelerating adoption of new technologies through knowledge-sharing and hands-on sessions across teams
- Expanded and maintained the **design system** across all company services, leading regular discussions with designers and engineers to continuously improve UI consistency, scalability, and developer productivity

ABZ Inc. (Seoul, South Korea)
Frontend Engineer

Jun. 2021 - Apr 2023

- Improved page performance by optimizing state and cache management with **vue query**, resulting in a **15% reduction in redundant API calls**, a **50% faster FCP** and an **80% faster LCP**
- Built and deployed scalable backend infrastructure using **Docker**, **Amazon ECS**, and **AWS CodeDeploy**, enabling fast autoscaling and reliable Blue/Green deployments
- Created and scaled a reusable design system using the **atomic design methodology** and **Storybook**, significantly improving UI consistency and development speed across multiple teams
- Maintained Korea's leading link-in-bio service (20M+ MAU, 300K+ users), ensuring high availability and continuous performance improvements

TECHNICAL SKILLS

Languages : Typescript, Javascript, Python, SQL
Frameworks & Libraries : React.js, Vue.js, Next.js, Nuxt.js, Node.js, React Hook Form, Zod, Vitest
State Management : React Query, Recoil, Vue Query, Vuex
Cloud & Devops : AWS (ECS, CodeDeploy, CloudFront, S3, Lambda, Route 53), Docker, Git
Backend : Django, Firebase, Supabase
Tools : Figma, Notion, Slack, Postman, DBeaver, Jira

EDUCATION

Dankook University (YongIn, South Korea)
Bachelor of Science in Computer Science
GPA : 3.83 / 4.5
Gold Prize, Capstone Project

Mar. 2014 - Feb. 2021

- Developed an Android app that provides alarms and navigations based on class schedules, using Java and Mapbox
- Led a 4-person team, facilitating effective task division and resolving technical blockers through collaboration
- Actively collaborated with Mapbox support, troubleshooting API usage and applying fixes that improved navigation reliability
- Shared implementation details with students and viewers via email, after the release of the project's [YouTube video](#)
