SUMMARY

Frontend Engineer with 3+ years of experience building user-focused products using React and Typescript. I enjoy learning and applying new technologies to drive the growth of both the team and the product. Experienced in fast-paced environments, I actively communicate and take initiative to turn ideas into meaningful impact.

EXPERIENCE

Frontend Engineer

Jan 2024 - Present

ABZ Inc | Seoul, South Korea

- Built a brand-creator collaboration platform using Next.js and TypeScript. Leveraged React Hook Form for complex data and React Query for API optimization. Conducted user interviews to drive feature development and improve user experience
- Developed a group buying e-commerce solution with Next.js and TypeScript, implemented business logic for the full product lifecycle. Built a deployment pipeline for Next.js with GitHub Actions, ensuring reliable and efficient releases
- Reduced Next.js deployment time by **50%** with Yarn Berry and Docker optimizations, increasing team productivity and enabling faster releases and quicker issue resolution
- Resolved delays and data loss in axios-based event tracking by adopting the Beacon API, achieving **0% event loss** and improved user experience
- Hosted a **biweekly Engineering Day**, fostering a culture of continuous learning and accelerating the adoption of new technologies through knowledge sharing and hands-on sessions

Frontend Engineer

Jun 2021 - Apr 2023

ABZ Inc | Seoul, South Korea

- Contributed to **4x user growth** by developing and maintaining Korea's leading link-in-bio service
- Reduced redundant API calls by **15%** and improved FCP by **50%** and LCP by **80%** by optimizing state and cache management with Vue Query
- Built scalable and reliable server infrastructure with Docker and AWS ECS, improving autoscaling speed and stability through CloudWatch-based metrics
- Developed a reusable design system with Atomic Design and Storybook, improving UI consistency and accelerating development speed across teams

SKILLS

- **Languages** : Typescript, Javascript
- **Frameworks & Libraries** : React, Vue, Next, Nuxt, Node.js
- **Cloud & Devops** : AWS (S3, ECS, CloudFront, CodeDeploy, Lambda, Route 53), Docker, Git
- **Backend & Databases** : Python, SQL, Django, Firebase, Supabase
- **Tools** : Figma, Notion, Slack, Jira

EDUCATION

Dankook University

Mar 2014 - Feb 2021

YongIn, South Korea

Bachelor of Science in Computer Science | GPA : 3.83 / 4.5

Gold Prize, Capstone Project

- Developed an Android app with Java and Mapbox that delivered class schedule-based alarms and campus navigation
- Led a 4-person team, driving task division and resolving technical blockers through collaboration
- Partnered with Mapbox support to resolve API issues and apply fixes that improved navigation reliability
- Shared implementation details with students and viewers following the release of the project's [YouTube demo](#)
